monitor
& timer

new

A simple and fun way to look at water saving.

With the Efergy Showertime water saving monitor & timer, you will be able to understand how much water you use every time you have a shower.

With the bathroom and toilet using nearly 40% of all water in the home, the shower is the perfect place to start thinking about saving water, and there is no better time to start!

efficient energy through technology...

ShowerTime

water saving monitor & timer

Programmable water targets, with calibrated filling display.
LCD display shows volume of water in numerical and graphical format.

- Waterproof case and buttons
- Wall mounted or lanyard hung
- Lithium battery with a life of 12 months

1a) Animated Drops

The drops alternate between two sets of drops representing the falling of water (and filling the tank).

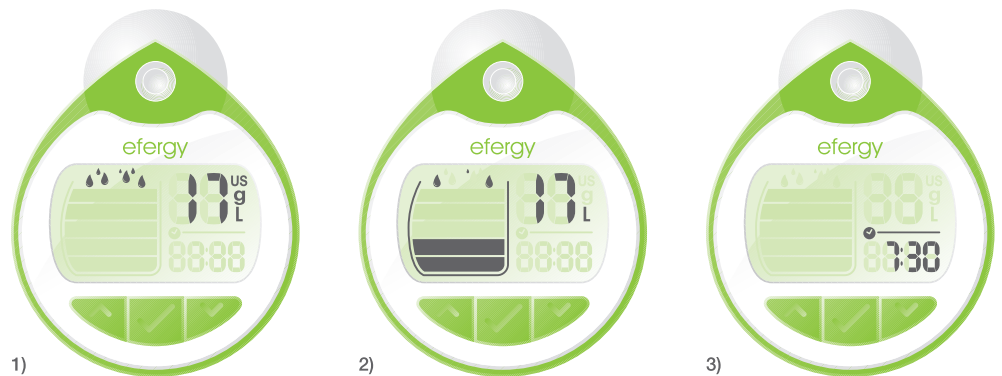

1b) Water Consumption

Two large digits show the current estimated water consumption. Units can be changed to Gallons, US Gallons and Litres.

2) Water Consumption Tank

5 Segments fill up whilst the shower is in use. Each segment represents 10 units of water.

3) Clock

The Efergy Showertime water saving monitor & timer displays how much water is being using when the users takes a shower or fills a bath.

With the average person /household using around 150litres a day, and with most countries looking at ways to cut domestic water use by 10-20%, the Efergy Showertime water saving monitor & timer offers help in reducing your usage.

Efergy Showertime shower monitor & timer allows you to set targets for water usage and sounds an alarm when that target is reached and could help save 1000's of litres of water a year and help reduce your water bills.

- Easy set up and usage.

How its works:

The Efergy Showertime water saving monitor & timer comes with a eco-container which is used to measure the flow rate of the shower or bath. Once the container is full the monitor is set. Every time you take a shower or bath you can measure the amount of water used. It's great for comparing volumes of water use.

We take clean water for granted. This innovative device can help increase the understanding of water usage and water monitoring around the home.

The display shows how long you have been in the shower, the amount of water used and the time on a 24 hour clock.

Specification

LCD Display
